Receiving the “Spread Your Wings” Scholarship would mean a great deal to me because it represents an opportunity to continue pursuing my education and career goals with less financial stress on my family. As a student in the Academy of Engineering program at my high school, I have worked hard to challenge myself academically and prepare for a future in technology. I am proud to have been accepted into Virginia State University, where I plan to major in Cybersecurity and continue building the skills needed to succeed in a growing and important field.

This scholarship would also be especially meaningful because attending college will be my first time living away from home. While this transition is exciting, it is also a major step toward independence and personal growth. Receiving the “Spread Your Wings” Scholarship would give me confidence knowing that others believe in my potential and are supporting me as I begin this new chapter of my life.

Most importantly, this scholarship would motivate me to continue striving for excellence, giving back to my community, and making my family proud. I hope to use my education and future career in Cybersecurity to create opportunities not only for myself, but also to help others and make a positive impact in the future.
